PETITION IN OPPOSITION TO:
Electricity Privatisation

To the President and Members of the Legislative Council of New South Wales:
This petition of citizens of New South Wales brings to the attention of the House the serious matter of electricity privatisation.

Because energy use is such an important part of the climate change problem, it is vital that electricity retailers and generators are kept in public hands.

Public ownership is essential if this state is to reshape its electricity industry to slash emissions. Publicly-owned companies can be instructed to work with consumers to reduce electricity demand.

Privately-owned retailers will need to sell more energy to make more profits, leading to increased greenhouse gas emissions; cause huge job losses, reduce consumer protection and increase risk to electricity supply.

We request that the members of the House oppose electricity privatisation.
